Installation med DrakX

Ingen kommer att se alla installerarens skärmbilder som du ser i den här handboken. Vilka skärmbilder som just du kommer att se beror på din hårdvara och vilka val du gör under installationen.

1. Välj och använd ISO-filer

1.1. Presentation

Mageia is distributed via ISO images. This page will help you to choose which image best suits your needs.

There are three types of installation media:

- **Classical installer:** Booting with this media provides you with the maximum flexibility when choosing what to install, and for configuring your system. In particular, you have a choice of which Desktop environment to install.
- **LIVE media:** This option allows you to try out Mageia without having to actually install it, or make any changes to your computer. However, the Live media also includes an Installer, which can be started when booting the media, or after booting into the Live operating system itself.

The Live Installer is simpler compared to the Classical Installer - but you have fewer configuration options.

Live ISOs can only be used to create "clean" installations, they cannot be used to upgrade previously installed Mageia releases.

• Net Install: These are minimal ISO's containing no more than that which is needed to start the DrakX installer and find DrakX-installer-stage2 and other packages that are needed to continue and complete the install. These packages may be on the PC hard disk, on a local drive, on a local network or on the Internet.

These media are very light (less than 100 MB) and are convenient if bandwidth is too low to download a full DVD, or if you have a PC without a DVD drive or is unable to boot from a USB stick.

More details are given in the next sections.

1.2. Media

1.2.1. Definition

Here, a medium (plural: media) is an ISO image file that allows you to install and/or update Mageia and, by extension, any physical medium (DVD, USB stick, ...) the ISO file is copied to.

Du kan hitta ISO-filer för Mageia här [http://www.mageia.org/en/downloads/].

1.2.2. Klassiska installtionsmedier

1.2.2.1. Vanliga funktioner

- De här ISO-filerna använder den klassiska installeraren som kallas DrakX
- They are used for performing clean installs or to upgrade a previously installed version of Mageia
- Olika media för 32 och 64-bitars arkitekturer
- Some tools are available in the Installer "Welcome" screen: *Rescue System, Memory Test,* and *Hardware Detection Tool*
- Varje DVD innehåller många tillgängliga skrivbordsmiljöer och språk
- You'll be given the choice during the installation to add non-free software

1.2.3. Live media

1.2.3.1. Vanliga funktioner

- Can be used to preview the Mageia operating system without having to install it
- Live-mediet inkluderar också en installerare.
- Varje ISO innehåller endast en skrivbordsmiljö (Plasma, GNOME eller Xfce)
- Olika media för 32 och 64-bitars arkitekturer
- De innehåller icke-fri mjukvara

1.2.3.2. Live DVD Plasma

- Endast skrivbordsmiljön Plasma
- All available languages are present
- endast 64-bitars arkitektur

1.2.3.3. Live DVD GNOME

- endast skrivbordsmiljön GNOME
- All available languages are present
- endast 64-bitars arkitektur

1.2.3.4. Live DVD Xfce

- endast skrivbordsmiljön Xfce
- All available languages are present
- 32 eller 64-bitars arkitekturer

1.2.4. Net install media

1.2.4.1. Vanliga funktioner

- Olika media för 32 och 64-bitars arkitekturer
- First steps are English language only

1.2.4.2. netinstall.iso

• Innehåller endast fri mjukvara, för de som föredrar att inte använda icke-fri mjukvara

1.2.4.3. netinstall-nonfree.iso

• Innehåller icke-fri mjukvara (mestadels drivrutiner, kodekar...) för de som behöver det

1.3. Laddar ner och kontrollerar media

1.3.1. Hämtar

Once you have chosen your ISO file, you can download it using either http or BitTorrent. In both cases, you are provided with some information, such as the mirror in use and an option to switch to an alternative if the bandwidth is too low.

If http is chosen you will also see some information regarding checksums.

md5sum, sha1sum and sha512sum (the most secure) are tools to check the ISO integrity. Copy one of the checksums (string of alphanumeric characters) for use in the next section.

In the meantime, a window to download the actual ISO will open:

Klicka på Spara fil, klicka sen på OK.

1.3.2. Kontrollerar integriteten på nerladdad media

The checksums referred to earlier, are digital fingerprints generated by an algorithm from the file to be downloaded. You may compare the checksum of your downloaded ISO against that of the original source ISO. If the checksums do not match, it means that the actual data on the ISO's do not match, and if that is the case, then you should retry the download or attempt a repair using BitTorrent.

To generate the checksum for your downloaded ISO, open a console, (no need to be root), and:

- To use the md5sum, type: md5sum path/to/the/image/file.iso
- To use the sha1sum, type: sha1sum path/to/the/image/file.iso
- To use the sha512sum, type: sha512sum path/to/the/image/file.iso

Exempel:

then compare the result (you may have to wait for a while) with the ISO checksum provided by Mageia.

1.4. Bränn eller dumpa ISO-filen.

The verified ISO can now be burned to a CD/DVD or "dumped" to a USB stick. This is not a standard copy operation, as a bootable medium will actually be created.

1.4.1. Att bränna ISO-filen till en CD/DVD

Whichever software you use, ensure that the option to burn an *image* is used. Burn *data* or *files* is NOT correct. See the <u>the Mageia wiki</u> [https://wiki.mageia.org/en/Writing_CD_and_DVD_images] for more information.

1.4.2. Dumpa ISOn till ett USB-minne

All Mageia ISOs are hybrids, which means you can dump them to a USB stick and then use that to boot and install the system.

Dumping an image onto a flash device destroys any previous file-system on the device and all existing data will be lost.

Also, the only partition on the flash device will then just be the Mageia ISO partition.

So, if an ISO of about 4GB is written to an 8GB USB stick, the stick will then only show up as 4GB. This is because the remaining 4GB is no longer formatted - hence not currently available for use. To recover the original capacity, you must reformat and repartition the USB stick.

1.4.2.1. Använda ett grafiskt verktyg i Mageia

Du kan använda ett grafiskt verktyg som t. ex. <u>IsoDumper</u> [https://wiki.mageia.org/en/IsoDumper_Writing_ISO_images_on_USB_sticks]

1.4.2.2. Använda ett grafiskt verktyg i Windows

Du kan prova:

- <u>Rufus</u> [http://rufus.akeo.ie/?locale=en_US] using the "ISO image" option
- <u>Win32-diskavbildaren</u> [http://sourceforge.net/projects/win32diskimager]

1.4.2.3. Using the Command line within a GNU/Linux system

It is potentially *dangerous* to do this by hand. You risk overwriting potentially valuable existing data if you specify the wrong target device.

- 1. Öppna en konsol
- 2. Become a root (Administrator) user with the command su (don't forget the)

- 3. Plug in your USB stick but do not mount it (this also means do not open any application or file manager that could access or read it)
- 4. Skriv kommandot fdisk -l

```
[root@localhost ~]# fdisk -l
Disk /dev/sda: 298.1 GiB, 320072933376 bytes, 625142448 sectors
Jnits: sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 4096 bytes

```

5. Find the device name for your USB stick (by its size), for example /dev/sdb in the screenshot above, is an 8GB USB stick.

Alternatively, you can find the device name with the command **dmesg**. Towards the end of the following example, you can see the device name starting with sd, and in this case, sdd is the actual device. You can also see that its size is 2GB:

```
[72594.604531] usb 1-1: new high-speed USB device number 27 using
xhci_hcd
[72594.770528] usb 1-1: New USB device found, idVendor=8564,
idProduct=1000
[72594.770533] usb 1-1: New USB device strings: Mfr=1, Product=2,
SerialNumber=3
[72594.770536] usb 1-1: Product: Mass Storage Device
[72594.770537] usb 1-1: Manufacturer: JetFlash
[72594.770539] usb 1-1: SerialNumber: 18MJTWLMPUCC3SSB
```

[72594.770713] usb 1-1: ep 0x81 - rounding interval to 128 microframes, ep desc says 255 microframes [72594.770719] usb 1-1: ep 0x2 - rounding interval to 128 microframes, ep desc says 255 microframes [72594.771122] usb-storage 1-1:1.0: USB Mass Storage device detected [72594.772447] scsi host8: usb-storage 1-1:1.0 [72595.963238] scsi 8:0:0:0: Direct-Access JetFlash Transcend 2GB 1100 PQ: 0 ANSI: 4 [72595.963626] sd 8:0:0:0: [sdd] 4194304 512-byte logical blocks: (2.14 GB/2.00 GiB) [72595.964104] sd 8:0:0:0: [sdd] Write Protect is off [72595.964108] sd 8:0:0:0: [sdd] Mode Sense: 43 00 00 00 [72595.965025] sd 8:0:0:0: [sdd] No Caching mode page found [72595.965031] sd 8:0:0:0: [sdd] Assuming drive cache: write through sdd: sdd1 [72595.967251] [72595.969446] sd 8:0:0:0: [sdd] Attached SCSI removable disk

6. Skriv kommandot: dd if=genväg/till/ISO of=/dev/sdx bs=1M

Där X=namnet på din enhet t.ex: /dev/sdd

Example: dd if=/home/user/Downloads/Mageia-6-x86_64-DVD.iso of=/dev/sdd bs=1M

It might be helpful to know that if stands for input file and of stands for output file

- 7. Skriv kommandot: sync
- 8. This is the end of the process, and you may now unplug your USB stick.

2. DrakX, Mageias installerare

Oavsett om du är ny på GNU-Linux eller en erfaren användare så är Mageias installerare utformad för att göra din installation eller uppgradering så enkel som möjligt.

2.1. Installationsstegen

- The install process is divided into a number of steps the status of which is indicated in a panel to the left of the screen.
- Each step has one or more screens, which may also have *Advanced* sections with extra, less commonly required options.
- Most screens have *Help* buttons for further details about the particular step.

If at some point during the install you decide to abort the installation, it is possible to reboot, but please think twice before you do this. Once a partition has been formatted or updates have started to be installed, your computer is no longer in the same state and rebooting it could very well leave you with an unusable system.

If, in spite of this, you are very sure rebooting is what you want, go to a text terminal by pressing the keys **Ctrl+Alt+F2** together. After that, press **Ctrl+Alt+Delete** together to reboot.

2.2. Välkomstskärm för installationen

The particular screen that you will first see when booting from the Installation media will depend on whether your computer motherboard is of the Legacy (BIOS) or UEFI type.

The welcome menu screen has various options, however the default option will start the installer, and is normally all that you will need.

2.2.1. Legacy (BIOS) Systems

Meny

• Installera Mageia

Install Mageia to a hard disk. This is the default option, and will automatically start after a short while unless another option is selected.

Rescue System

This option allows you to either re-install the bootloader for an existing Mageia installation or you can use it to restore a Windows bootloader.

• Minnestest

Test the installed RAM by performing multiple read and write operations. Reboot to end the test.

• F2: Språk

Tryck F2 för alternativa språk.

2.2.2. UEFI-system

From this screen, you can access options by pressing \mathbf{e} to enter the edit mode. To come back to this screen, press **Esc** to quit without saving or press **F10** to save and quit.

Meny

- Installera: Påbörja installationsprocessen
- **Rescue:** This option allows you to either re-install the bootloader for an existing Mageia installation or you can use it to restore a Windows bootloader.
- F2: Språk: Tryck F2 för alternativa språk.

If you booted from a USB stick, you will see the above options duplicated, and in this case, you should use the set that will be suffixed with "USB".

2.3. Installationsproblem och möjliga lösningar

2.3.1. Inget grafiskt gränssnitt

- After the initial screen you did not progress to the *Language Selection* screen. This can happen with some graphic cards and older systems. Try using low resolution by typing **vgalo** at the prompt.
- If the hardware is very old, a graphical installation may not be possible. In this case it is worth trying a text-mode installation. To use this press **Esc** at the *Welcome* screen and confirm with **ENTER**. You will be presented with a black screen with a boot: prompt. Type **text** and press **ENTER** to continue with the installation in text mode.

2.3.2. Installationen hänger sig

If the system appeared to freeze during the installation, this may be a problem with hardware detection. In this case the automatic hardware detection may be bypassed and dealt with later. To try this, type **noauto** at the prompt. This option may also be combined with other parameters as necessary.

2.3.3. RAM-problem

This will rarely be needed, but in some cases the hardware may report the available RAM incorrectly. To specify this manually, you can use the mem=xxxM parameter, where xxx is the correct amount of RAM. e.g. mem=256M would specify 256MB of RAM.

2.3.4. Dynamiska partitioner

If you converted your hard disk from Basic format to Dynamic format in Microsoft Windows, then it is not possible to install Mageia on this disc. To revert to a Basic disk, see the Microsoft documentation: <u>http://msdn.microsoft.com/en-us/library/cc776315.aspx</u>.

3. Välj språk

- Select your preferred language, by first expanding the list for your continent. Mageia will use this selection during the installation and for your installed system.
- If it is likely that you (or others) will require several languages to be installed on your system, then you should use the *Multiple languages* option to add them now. It will be difficult to add extra language support after installation.

Ömageia	PLEASE CHOOSE A LANGUA	GE TO USE	
INSTALLATION Language • License • Partitioning • Installing • OONFIGURATION Users • Summary • Updates • Exit •	 America Multiple languages Help 	Snqip Slovenčina Slovenščina Srpska Cpncka Suomi Svenska Türkçe Українська Walon Avañe'ẽ English (British) English (American)	Next

Even if you choose more than one language, you must first choose one as your preferred language from the main list of languages. It will also be marked as chosen in the *Multiple languages* screen.

- If your keyboard language is not the same as your preferred language, then it is advisable to install the required language for your keyboard as well
- Mageia uses UTF-8 (Unicode) support by default. This may be disabled in the *Multiple languages* screen if you know that it is inappropriate for your language. Disabling UTF-8 applies to all installed languages.
- You can change the language for your system post-installation in the Mageia Control Center → System → localization for your system.

4. Anteckningar för licens och utgåvan

4.1. Licensavtal

- Before installing Mageia, please read the license terms and conditions carefully.
- These terms and conditions apply to the entire Mageia distribution and must be accepted before you can continue.
- To proceed, simply select Accept and then click on Next

If you decide not to accept these conditions, then we thank you for your interest in Mageia. Clicking *Quit* will reboot your computer.

4.2. Versionsinformation

Important information about this particular Mageia release can be viewed by clicking on the *Release Notes* button.

5. Ställ in SCSI

DrakX will normally detect hard disks correctly. However, with some older SCSI controllers it may be unable to determine the correct drivers to use and subsequently fail to recognise the drive.

If your device is not recognised, you will need to manually tell DrakX which SCSI drive(s) you have. DrakX should then be able to configure the drive(s) correctly.

• Installation

Use this option to perform a fresh installation of Mageia. This will format the root partition (/), but can preserve a pre-existing / home partition (a dedicated /home partition, rather than being incorporated within the root (/) partition itself).

• Uppgradering

Use this option to upgrade an existing installation of Mageia.

Only upgrading from a previous Mageia version that was *still supported* when this Installer's version was released, has been thoroughly tested. If you want to upgrade a Mageia version that has reached its "End Of Life" then it is better to do a "clean" install instead, while preserving your /home partition.

If you have discovered that you forgot to select an additional language, you can return from the *Install or Upgrade* screen to the language choice screen by pressing **Ctrl**+**Alt**+**Home**. Do **NOT** do this later in the install.

7. Tangentbord

DrakX väljer ett passande tangentbord för ditt språk. Om inget hittas så väljer den ett tangentbord med amerikansk layout.

- Försäkra dig om att valet är korrekt eller välj en annan tangenbordslayout. Om du inte vet vilken layout ditt tangentbord har, kontrollera specifikationen som följde med ditt system eller kontakta en datorleverantör. Det kan även finnas en etikett på tangentbordet som talar om vilken layout det har. Du kan även ta en titt här: <u>en.wikipedia.org/wiki/Keyboard_layout</u> [http://en.wikipedia.org/wiki/Keyboard_layout]
- If your keyboard isn't in the list shown, click on *More* to get a fuller list, and select your keyboard there.

After choosing a keyboard from the *More* dialogue, you'll return to the first keyboard choice dialogue and it will seem as though a keyboard from that screen was chosen. You can safely ignore this and continue the installation: the keyboard chosen from the full list will be applied.

• If you choose a keyboard based on non-Latin characters, you will see an extra dialogue screen asking how you would prefer to switch between the Latin and non-Latin keyboard layouts

8. Partitioning

8.1. Föreslagen partitionering

In this screen you can see the content of your hard drive(s) along with the DrakX partitioning proposals for where to install Mageia.

The actual options available from those shown below will vary according to the layout and content of your particular hard drive(s).

Ömageia	PARTITIONERING

Huvudsakliga alternativ

• Använd befintliga partitioner

Om det här alternativet är tillgängligt så har kompatibla Linux-partitioner hittats och kan användas för installation.

• Använd oanvänt utrymme

Om du har ledigt utrymme på din hårddisk kommer det här alternativet att använda det för att installera Mageia.

• Använd oanvänt utrymme i en Windows-partition

If you have unused space on an existing Windows partition, the installer may offer to use it. This can be a useful way of making room for your new Mageia installation, but is a risky operation so you should make sure you have backed up all important files!

With this option, the installer displays the remaining Windows partition in light blue and the proposed Mageia partition in dark blue with their intended sizes just underneath. You have the option to modify these sizes by clicking and dragging the gap between both partitions. See the following screenshot:

Radera och använd hela hårddisken

This option will allocate the entire drive for Mageia

This will erase ALL data on the selected hard drive. Take care! If you intend to use part of the disk for something else, or you already have data on the drive that you are not prepared to lose, then do not use this option.

Observera att det innebär att storleken på Windows-partitionen krymps. Partitionen måste vara "ren", dvs. att Windows måste ha stängts av korrekt när det användes sist. Den måste också ha defragmenterats, även om det inte är någon garanti för att filerna har flyttats bort ifrån ytan som kommer att användas. Du rekommenderas starkt att säkerhetskopiera dina personliga filer.

Anpassad diskpartitionering

Detta ger dig fullständig kontroll över placeringen av installationen på din/a disk/ar.

If you are not using the *Custom disk partitioning* option, then the installer will allocate the available space according to the following rules:

- If the total available space is less than 50 GB, then only one partition is created. This will be the / (root) partition.
- If the total available space is greater than 50 GB, then three partitions are created
 - 6/19 of the total available place is allocated to / with a maximum of 50 GB
 - 1/19 is allocated to swap with a maximum of 4 GB
 - the rest (at least 12/19) is allocated to /home

This means that from 160 GB or greater available space, the installer will create three partitions:

- 50 GB för /
- 4 GB för swap
- och det som återstår till /home

If you are using a UEFI system, the ESP (EFI System Partition) will be automatically detected - or created if it does not exist yet - and mounted on /boot/EFI. The *Custom disk partitioning* option is the only one that allows to check it has been correctly done.

If you are using a Legacy (also known as BIOS) system with a GPT partitioned disk, you need to create a BIOS boot partition if it doesn't already exist. It should be about 1 MiB with no mount point. It can be created with the Installer, under *Custom disk partitioning*, like any other partition. Be sure to select "BIOS boot partition" for filesystem type.

See **DiskDrake** for information on how to proceed.

Some newer drives are now using 4096 byte logical sectors, instead of the previous standard of 512. Due to lack of available hardware, the partitioning tool used in the installer has not been tested with such a drive.

Some SSD devices now use an erase block size over 1 MB. If you have such a device we suggest that you partition the drive in advance, using an alternative partitioning tool like gparted, and to use the following settings:

- *Justera till* = MiB
- Free space preceding (MiB) = 2

Also make sure all partitions are created using an even number of megabytes.

8.2. Välj monteringspunkter

Ömageja	PARTITIONERING		
INSTALLATION Välj språk • Licens • Partitionering Installerar KONFIGURATION Användare Sammanfattning Uppdateringar Avsluta	sda5 (11GB, /, ext4) sda7 (4.1GB, /home, ext4) sda8 (8.1GB, ext4) sda9 (13MB, ext4)	Välj monteringspunkter / /home	• • • •
	Image: High High High High High High High High		Föregående Nästa

Here you see the Linux partitions that have been found on your computer. If you don't agree with the DrakX suggestions, you can change the mount points yourself.

- To the left of the drop-down menus is a list of available partitions. For example: sda is a hard drive and 5 is a *partition number*, followed by the *(capacity, mount point, filesystem type)* of the partition.
- If you have several partitions, you can choose various different *mount points* from the drop down menu, such as /, /home and /var. You can even make your own mount points, for instance /video for a partition where you want to store your films, or perhaps /Data for all your data files.
- For any partitions that you don't need to make use of, you can leave the mount point field blank.

If you make any changes here, ensure you still have a / (root) partition.

If you are not sure what to choose, click *Previous* to go back and then tick *Custom disk partitioning*, where you can click on a partition to see its type and size. If you are sure the mount points are correct, click on *Next*, and choose whether you only want to format the partition suggested by DrakX, or more.

- Modify the layout of your disk(s) here. You can remove or create partitions, change the filesystem or size of a partition and even view their details before you start.
- There is a tab at the top for every detected hard disk (or other storage device, like a USB key). In the screenshot above there are two available devices: sda and sdb.
- For all other actions: click on the desired partition first. Then view it, or choose a filesystem and a mount point, resize it or wipe it. *Expert mode* provides more options such as to label (name) a partition, or to choose a partition type.
- Continue until you have adjusted everything to your satisfaction, then click *Done* when you're ready.

- 1. Take care with the *Clear all* option, use it only if you are sure you want to wipe all partitions on the selected storage device.
- 2. If you wish to use encryption on your / partition you must ensure that you have a separate / boot partition. The encryption option for the /boot partition must NOT be set, otherwise your system will be unbootable.

- If you are installing Mageia on a UEFI system, check that an ESP (EFI System Partition) is present and correctly mounted on /boot/EFI. See Figure 1 below.
- If you are installing Mageia on a Legacy/GPT system, check that a BIOS boot partition is present and of the correct type. See Figure 2 below.

Figur 1. EFI systempartition

Here you can choose which partition(s) you wish to format. Any data on partitions *not* marked for formatting will be preserved.

Usually, at least the partitions that DrakX selected need to be formatted.

Click on Advanced to choose the partitions you want to check for so-called bad blocks

If you're not sure you have made the right choice, you can click on *Previous*, again on *Previous* and then on *Custom* to get back to the main screen, where you can choose to view details of your partitions.

When you are confident about the selections, click on Next to continue.

9. Mjukvara

9.1. Val av media

9.1.1. Supplemental Installation Media

Ömageja	VAL AV MEDIUM
INSTALLATION Välj språk • Licens • Partitionering • Installerar • KONFIGURATION	Följande medier har blivit hittade och kommer att användas under installationen: - Core Release, - Nonfree Release. Har du några tilläggs-medier du vill konfigurera?
Sammanfattning Uppdateringar Avsluta	Ingen Cd-rom Nätverk (HTTP) Nätverk (FTP)
	Nätverk (NFS) ► Hjälp Nästa

This screen shows you the list of already recognised repositories. You can add other sources for packages, like an optical-disc or a remote source. The source selection determines which packages will be available during the subsequent steps.

För en nätverkskälla så finns det två steg att följa:

- 1. Väljer och aktiverar nätverket om det inte redan är uppe.
- 2. Selecting a mirror or specifying a URL (very first entry). By selecting a mirror, you have access to the selection of all repositories managed by Mageia, like the *Nonfree*, the *Tainted* repositories and the *Updates*. With the URL, you can designate a specific repository or your own NFS installation.

If you are updating a 64-bit installation which may contain some 32-bit packages, it is advised to use this screen to add an online mirror by selecting one of the Network protocols here. The 64-bit DVD ISO only contains 64-bit and *noarch* packages, it will not be able to update the 32-bit packages. However, after adding an online mirror, the installer will find the needed 32-bit packages there.

9.1.2. Tillgängligt media

Ömageia	VAL AV MEDIUM
INSTALLATION ∨älj språk ●	Here you can enable more media if you want. Some hardware on your machine needs some non free firmwares in order for the free software drivers to work. You should enable "Nonfree Release"
Licens ● Partitionering ●	🖌 Core Release
Installerar	✓ Core Updates
KONFIGURATION	✓ Nonfree Release
Användare •	✓ Nonfree Updates
Sammanfattning = Uppdateringar =	C Tainted Release
"Tainted Release" contains software from "Core Releas	software that can not be distributed in every country due to software patents.It also contains e" rebuild with additional capabilities.
-a-a- -	▶ Hjälp Nästa

Här har du en lista över tillgängliga arkiv. Alla arkiv är inte tillgängliga beroende på vilket media du använder för att installera. Valet av arkiv bestämmer vilka paket som kommer att vara tillgängliga för val i nästkommande steg.

- Core-arkivet kan inte inaktiveras eftersom det innehåller basen för distributionen.
- The *Nonfree* repository includes packages that are free-of-charge, i.e. Mageia may redistribute them, but they contain closed-source software (hence the name Nonfree). For example this repository includes nVidia and AMD graphics card proprietary drivers, firmware for various WiFi cards, etc.
- The *Tainted* repository includes packages released under a free license. The main criteria for placing packages in this repository is that they may infringe patents and copyright laws in some countries, e.g. multimedia codecs needed to play various audio/video files; packages needed to play commercial video DVD's, etc.

9.2. Val av skrivbordsmiljö

Some choices made here will open other screens with related options.

After the selection step(s), you will see a slideshow during the installation of required packages. The slideshow can be disabled by pressing the *Details* button.

Packages are arranged into common groups, to make choosing what you need on your system a lot easier. The groups are fairly self explanatory, however more information about the content of each is available in tool-tips which become visible as the mouse is hovered over them.

- Arbetsstation
- Server
- Grafisk miljö
- Individual Package Selection: you can use this option to manually add or remove packages

See Minimal Install for instructions on how to do a minimal install (without or with X & IceWM).

9.4. Minimal installation

Minimal Installation is intended for those with specific uses in mind for Mageia, such as a server or a specialised workstation. You will probably use this option combined with the *Individual package selection* option to fine-tune your installation. See <u>Choose Packages Tree</u>.

• You can choose a *Minimal Installation* by de-selecting everything in the *Package Group Selection* screen, see <u>Choose Package Groups</u>.

If desired, you can additionally tick the Individual package selection option in the same screen.

• If you choose this installation method, then the relevant screen (see screenshot below) will offer you a few useful extras to install, such as documentation and "X".

If the *With X* option is selected, then IceWM (a lightweight desktop environment) will also be included.

The basic documentation is provided in the form of "man" and "info" pages. It contains the man pages from the <u>Linux Documentation Project</u> [http://www.tldp.org/manpages/man.html] and the <u>GNU coreutils</u> [http://www.gnu.org/software/coreutils/manual/] info pages.

	▶ Hjälp Nästa			

10.1. Ställ in ett administratörs (root) -lösenord:

It is advisable for all Mageia installations to set a superuser (Administrator) password, usually called the *root* password in Linux. As you type a password into the top box a shield will change from red-to-yellow-to-green depending on the strength of the password. A green shield shows you are using a strong password. You need to repeat the same password in the box underneath, to check that the first entry was not mistyped.

All passwords are case-sensitive. It is best to use a mixture of letters (upper and lower case), numbers and other characters in a password.

10.2. Lägg till en användare

Add a User here. A regular user has fewer privileges than the superuser (root), but enough to use the Internet, office applications or play games and anything else the average user might use a computer for.

• Ikon

Klicka på den här knappen om du vill ändra på användarens ikon

• Fullständigt namn

Klistra in användarens riktiga namn i den här textrutan

• Inloggningsnamn

Enter the user login name or let DrakX use a version of the user's real name. **The login name is case-sen-***sitive.*

Lösenord

Type in the user password. There is a shield at the end of the text box that indicates the strength of the password. (See also <u>Notera</u>)

Password (again): Retype the user password. DrakX will check that you have not mistyped the password.

Any users added while installing Mageia, will have a home directory that is both read and write protected (umask=0027)

You can add any extra needed users in the *Configuration - Summary* step during the install. Choose *User management*.

Rättigheterna för åtkomst kan också ändras efter installationen.

10.3. Användarhantering (avancerad)

The Advanced option allows you to edit further settings for the user you are adding.

- *Shell*: This drop-down list allows you to change the shell available to any user you added in the previous screen. Options are Bash, Dash and Sh
- *User ID*: Here you can set the user ID for any user you added in the previous screen. If you are unsure what the purpose of this is, then leave it blank.
- Group ID: This lets you set the group ID. Again, if unsure, leave it blank.

11. Grafisk konfiguration

11.1. Konfigurera grafikkort och bildskärm

× -	▶ Hjälp	Nästa

No matter which graphical environment (also known as desktop environment) you chose for this install of Mageia, they are all based on a graphical user interface system called X Window System, or simply "X". So in order for KDE Plasma, GNOME, LXDE or any other graphical environment to work well, the following "X" settings need to be correct.

Choose the appropriate settings manually if you think the details are incorrect, or if none are shown.

Grafikkort

If you need to, you can select a specific card from this expandable list. See <u>Avsnitt 11.2</u>, "Välj en X-server (konfigurera ditt grafikkort)".

• Skärm

You can choose Plug 'n Play, if applicable, or choose your monitor from the *Vendor* or *Generic* lists. Choose *Custom* if you prefer to manually set the horizontal and vertical refresh rates of your monitor. See <u>Avsnitt 11.3, "Att välja din bildskärm"</u>.

• Upplösning

The resolution and color depth of your monitor can be set here.

• Prova

The test button does not always appear during install. If the option is there, and you test your settings, you should be asked to confirm that your settings are correct. If you answer *Yes*, the settings will be kept. If you

don't see anything, you'll return to the configuration screen and be able to reconfigure everything until the test result is satisfactory. If the test option is not available, then make sure your settings are on the safe side.

• Alternativ

Här kan du välja att aktivera eller inaktivera olika alternativ.

There is a risk of damaging a monitor if you choose refresh rates that are outside the frequency range of that monitor. This applies to older CRT displays: modern monitors will reject an unsupported frequency and normally enter standby mode.

11.2. Välj en X-server (konfigurera ditt grafikkort)

Ömageia	X-SERVER
INSTALLATION Välj språk ●	Välj en X-server
Licens • Partitionering • Installerar • KONFIGURATION Användare •	 >-ATI >-Ark Logic >-Chips & Technologies >-Cirrus Logic >-Diamond
Sammanfattning • Uppdateringar • Avsluta •	 > Digital - Intel - 740-based cards - 810 and later - Poulsbo US15W (GMA500)
	 Vermilion-based cards → Matrox Föregående Nästa

DrakX har en väldigt omfattande databas av grafikkort och identifierar oftast ditt nuvarande grafikkort korrekt.

Om installationen inte har upptäckt ditt grafikkort korrekt och du vet vilket du har så kan du välja det från trädet genom:

- Tillverkare
- then the make of your card
- and the model of card

If you cannot find your card in the vendor lists (because it's not yet in the database or it's an older card) you may find a suitable driver in the *Xorg* category, which provides more than 40 generic and open source video card drivers. If you still can't find a specific driver for your card there is the option of using the VESA driver which provides basic capabilities.

Be aware that if you select an incompatible driver you may only have access to the *Command Line Interface*

Some video card manufacturers provide proprietary drivers for Linux which may only be available in the *Nonfree* repository and in some cases only from the card manufacturers' websites. The *Nonfree* repository needs to be explicitly enabled to access them. If you didn't enable it previously, you should do this after your first reboot.

11.3. Att välja din bildskärm

DrakX har en väldigt omfattande databas av grafikkort och kommer oftast att identifiera ditt nuvarande grafikkort rätt.

Selecting a monitor with different characteristics could damage your monitor or video hardware. Please don't try something without knowing what you are doing. If in doubt you should consult your monitor documentation.

Anpassad

This option allows you to set two critical parameters: the vertical refresh rate and the horizontal sync rate. Vertical refresh determines how often the screen is refreshed and horizontal sync is the rate at which scan lines are displayed.

	Det ar VALDIGI VIKIIGI att du inte anger en skarmtyp med ett synkroniseringsintervall
	som är över kapaciteten för din bildskärm, då kan du skada den. Om du är osäker så välj
	en försiktig inställning och läs dokumentationen för din bildskärm.
Plug'n Play	This is the default option and automatically tries to determine the monitor type from the monitor database.
Tillverkare	Om installationen inte har upptäckt din bildskärm och du vet vilken du har så kan du välja den från trädet genom att välja:

. ..

. .

- Tillverkare
- Monitor model
- Allmänna Selecting this group will list nearly 30 display configurations such as 1024x768 @ 60Hz and includes flat-panel displays as used in laptops. This is often a good monitor selection group if you need to use the VESA card driver when your video hardware cannot be determined automatically. Once again it may be wise to be conservative in your selections.

12. Starthanterare

12.1. Grub2

Grub2 on Legacy MBR/GPT systems

- GRUB2 (with or without graphical menu) will be used exclusively as the bootloader for a Legacy/MBR or Legacy/GPT system.
- By default, a new bootloader will be written into either the MBR (Master Boot Record) of your first hard drive or in the BIOS boot partition.

Grub2-efi för ett UEFI-system.

- GRUB2-efi will be used exclusively as the bootloader for a UEFI system.
- By default, a new bootloader (Grub2-efi) will be written into the ESP (EFI System Partition).

If there are already UEFI-based operating systems installed on your computer (Windows 8 for example), the Mageia installer will detect the existing ESP created by Windows and add grub2-efi to it. If no ESP exists, then one will be created. Although it is possible to have several ESPs, only one is required, whatever the number of operating systems you have.

12.2. Bootloader Setup

12.2.1. Huvudalternativ för startshanteraren

Ornageia	STARTHANTERARENS HUVUDALTERNATIV	
	• Starthanterare

1		
2		
N	▶ Hjälp	Föregående Nästa

• Uppstartshanterare att använda

This feature is only available to Legacy MBR/BIOS systems. Users of UEFI systems will not see this option here.

• Boot device

Ändra inte på det här om du inte vet vad du gör

• Fördröj innan standard-avbilden startas

This text box lets you set a delay, in seconds, before the default operating system is started up.

Säkerhet

This allows you to set a password for the bootloader. This means a username and password will be required when booting in order to select a booting entry or change settings. This is optional, and most people are not likely to have a need for it. The username is root and the password is the one chosen hereafter.

Lösenord

Välj ett lösenord för uppstartshanteraren (valfritt)

• Lösenordet (igen)

Retype the password and DrakX will check that it matches with the one set above

Avancerad

• Aktivera ACPI

ACPI (Advanced Configuration and Power Interface) is a standard for power management. It can save energy by stopping unused devices. Deselecting it could be useful if, for example, your computer does not support ACPI or if you think the ACPI implementation might cause some problems (for instance random reboots or system lockups).

• Aktivera SMP

This option enables/disables symmetric multiprocessing for multi-core processors

• Aktivera APIC

Enabling this gives the operating system access to the Advanced Programmable Interrupt Controller. APIC devices permit more complex priority models, and Advanced IRQ (Interrupt Request) management.

• Aktivera Lokal APIC

Here you can set Local APIC, which manages all external interrupts for a specific processor in an SMP system

12.2.2. Konfiguration av starthanterare

Standard

The operating system to be started up by default.

Fäst

This option lets you pass information to the kernel or tell the kernel to give you more information as it boots.

• Undersök främmande OS

If you already have other operating systems installed, Mageia attempts to add them to your new Mageia boot menu. If you don't want this behaviour, then untick the Probe Foreign OS option.

Avancerad

• Grafikläge

This sets the screen size and colour depth to be used by the boot menu. If you click the down-triangle you will be offered other size and colour depth options.

• Rör inte ESP eller MBR

Select this option if you don't want a bootable Mageia, but would rather chain-load it from another OS. You will get a warning that the bootloader is missing. Click *Ok* if you are sure you understand the implications, and wish to proceed.

12.3. Fler alternativ

12.3.1. Använder en befintlig startshanterare

The exact procedure for adding Mageia to an existing bootloader is beyond the scope of this documentation. However in most cases it will involve running the relevant bootloader installation program, which should detect Mageia and automatically add an entry for it in the bootloader menu. See the documentation for the relevant operating system.

12.3.2. Installera utan en uppstartshanterare

While you can opt to install Mageia without a bootloader (see section 2.1 Advanced), this is not recommended unless you absolutely know what you are doing, as without some form of bootloader your operating system will be unable to start.

12.3.3. Lägg till eller ändra en post i bootmenyn

To do this you need to manually edit /boot/grub2/custom.cfg or use the software **grub-customizer** tool instead (available in the Mageia repositories).

13. Configuration Summary

DrakX presents a proposal for the configuration of your system depending on the choices you made and on the hardware detected. You can check the settings here and change them if you want by pressing *Configure*.

As a general rule, it is recommended that you accept the default settings unless:

- det finns kända problem med standardinställning
 - standardinställningen har redan provats men misslyckades
- some other factor mentioned in the detailed sections below is an issue

13.1. Systemparametrar

• Tidszon

DrakX selects a timezone for you, depending on your preferred language. You can change it if needed. See also <u>Configure Timezone</u>

• Land/Region

If the selected country is wrong, it is very important that you correct the setting. See Select Country

Uppstartshanterare

DrakX proposal for the bootloader setting

Do not change anything, unless you know how to configure GRUB2. For more information, see Bootloader

• Användarhantering

You can add extra users here. They will each be allocated their own /home directories.

• Tjänster

System services refer to those small programs which run in the background (daemons). This tool allows you to enable or disable certain processes.

You should check carefully before changing anything here - a mistake may prevent your computer from operating correctly. For more information, see <u>Configure Services</u>

13.2. Hårdvaruparametrar

• Tangentbord

Configure your keyboard layout according to your location, language and type of keyboard.

Tänk på att om du har en felaktig tangentbordslayout och vill ändra den så kommer lösenorden också att ändras.

• Mus

Här kan du lägga till eller konfigurera andra pekdon, pekplattor, styrkulor etc.

• Ljudkort

The installer will use the default driver if one is available.

If there is no actual default driver for your sound card, there may be other possible alternative drivers available to choose from. If this is the case, but you think the installer has not made the most appropriate choice, you can click on *Advanced* to manually specify a driver.

• Grafiskt gränssnitt

This section allows you to configure your graphics card(s) and displays. For more information, see <u>Av-snitt 11.1, "Konfigurera grafikkort och bildskärm"</u>

Ömaaeia	SAMMANFATTNING

			k

13.3. Nätverk och Internetparametrar

Nätverk

You can configure your network here, but for network cards with non-free drivers it is better to do that after reboot, using the Mageia Control Center, if you have not yet enabled the *Nonfree* media repositories.

When you add a network card, do not forget to set your firewall to monitor that interface as well.

Proxy-servrar

A Proxy Server acts as an intermediary between your computer and the wider Internet. This section allows you to configure your computer to utilize a proxy service.

You may need to consult your systems administrator to obtain the parameters you need to enter here.

13.4. Säkerhet

• Säkerhetsnivå

The Security level for your computer, in most cases the default setting (Standard) is adequate for general use. Select the option which best suits your usage.

Brandvägg

The firewall allows you to manage which network connections are allowed on your computer. The safe and secure default is to allow ZERO inbound connections. This does not stop you connecting outbound and using your computer normally.

Please be aware that the Internet is a high risk network where there are continuous attempts to probe and attack systems. Even seemingly "safe" connections such as ICMP (for ping) have been used as covert data channels for exfiltrating data by malicious persons.

For more information, see Firewall.

Bear in mind that allowing everything (no firewall) may be very risky.

14. Locale

14.1. Ställ in din tidszon

Ömaaeia	TIDSZON
C 1 1 1 1	Vilken är din tidszon?
INSTALLATION Välj språk • Licens • Partitionering • Installerar • KONFIGURATION Användare • Sammanfattning • Uppdateringar • Avsluta •	Nome - Samara - San_Marino - Sarajevo - Simferopol - Skopje - Sofia Stockholm - Tallinn - Tirane - Tiraspol - Uzhgorod - Vaduz - Vatican
	Föregående Nästa

• Välj din tidszon genom att välja ditt land eller en stad nära dig i samma tidszon.

In the next screen you can choose to set your hardware clock to local time or to GMT, also known as UTC.

Om du har mer än ett operativsystem i din dator så se till att de är inställda på lokal tid eller till UTC/GMT.

- Select your country or region. This is important for all kinds of settings, like the currency and wireless regulatory domain. Setting the wrong country can lead to being unable to use a Wireless network.
- If your country isn't in the list, click the *Other Countries* option and choose your country / region there.

If your country is only in the *Other Countries* list, after clicking *OK* it may seem that a country from the main list was chosen. Despite this, DrakX will actually apply your choice.

14.2.1. Inmatningsmetod

In the *Other Countries* screen you can also select an input method (at the bottom of the list). Input methods allow users to input multilingual characters (Chinese, Japanese, Korean, etc). IBus is the default input method, so users should not need to configure it manually. Other input methods (SCIM, GCIN, HIME, etc) also provide similar functions and can be installed if you added HTTP/FTP media before package selection.

If you missed the input method setup during installation, you can access it post-install via Configure your Computer \rightarrow System, or by running **localedrake** as *root*.

N	▶ Hjälp Föregående Nästa
- 3 5	

Vänligen välj den önskade säkerhetsnivån

Standard is the default, and recommended setting for the average user.

Secure will create a highly protected system - for instance if the system is to be used as a public server.

Säkerhetsadministratör

This item allows you to configure an email address to which the system will send *security alert messages* when it detects situations which require notification to a system administrator.

A good, and easy-to-implement, choice is to enter <user>@localhost - where <user> is the login name of the user to receive these messages.

The system sends such messages as **Unix Mailspool messages**, not as "ordinary" SMTP mail: this user must therefore be configured for receiving such mail!

It will always be possible to adjust your security settings post-install in the *Security* section of the Mageia Control Center.

19. Brandvägg

This section allows you to configure some simple firewall rules: they determine which type of message from the Internet will be accepted by the target system. This, in turn, allows the corresponding services on the system to be accessible from the Internet.

In the default setting (no button is checked), no service of the system is accessible from the network. The *Everything (no firewall)* option enables access to all services of the machine - an option that does not make much sense in the context of the installer since it would create a totally unprotected system. Its veritable use is in the context of the Mageia Control Center (which uses the same GUI layout) for temporarily disabling the entire set of firewall rules for testing and debugging purposes.

All other options are more or less self-explanatory. As an example, you will enable the CUPS server if you want printers on your machine to be accessible from the network.

Avancerat

The *Advanced* option opens a window where you can enable a series of services by typing a list of "couples" (blank separated)

<portnummer>/<protokoll>

- *<port-number>* is the value of the port assigned to the service you want to enable (e.g. 873 for the RSYNC service) as defined in *RFC-433*;

- *<protocol>* is one of *TCP* or *UDP* - the internet protocol that is used by the service.

For instance, the entry for enabling access to the RSYNC service therefore is 873/tcp.

In case a service is implemented to use both protocols, you specify 2 couples for the same port.

20. Uppdateringar

I
~~ ~	▶ Hjälp Starta om

You have finished installing and configuring Mageia and it is now safe to remove the installation medium and reboot your computer.

After rebooting, you can use the bootloader screen to choose which operating system to start (if there are more than one on your computer).

Om du inte ändrade inställningarna för starthanteraren så kommer Mageia att väljas och starta automatiskt.

Njut!

Visit <u>www.mageia.org/en/</u> [http://www.mageia.org/en/] if you have any questions or want to contribute to Mageia

22. Avinstallera Mageia

If Mageia didn't convince you or you can't install it correctly - in short you want get rid of it - that is your right and Mageia also gives you the possibility to uninstall. This is not true for every operating system.

After backing up your data, reboot your Mageia installation DVD and select *Rescue system*, then *Restore Windows boot loader*. At the next boot, you will only have Windows, with no option to choose your Mageia operating system.

In Windows, to recover the space used by Mageia partitions: click on Start \rightarrow Control Panel \rightarrow Administrative

Tools \rightarrow Computer Management \rightarrow Storage \rightarrow Disk Management. You will recognise a Mageia partition because they are labeled Unknown, and also by their size and place on the disk. Right-click on each of these partitions and select *Delete* to free up the space.

If you are using Windows XP, you can create a new partition and format it (FAT32 or NTFS). It will then get a partition letter.

If you have Vista or 7, you have one more possibility, you can extend the existing partition that is at the left of the freed space. There are other partitioning tools that can be used, such as **gparted**, available for both Windows and Linux. As always, when changing partitions, be very careful to back up anything important to you.
