- ¶ The ‘[Boisik](#)’ font is a Metafont typeface greatly inspired by Baskerville design. It is intended for mathematical typesetting: [Boisik](#) supports all characters and math symbols described in the book ‘*Computer Modern Typefaces*’ by D. E. KNUTH. Symbols from AMS font set (*msam* and *msbm*) and few others are supported too. Also letters for the Czech language and text companion symbols are available. Á á Č č Ď ě É é Ě ě Í í Ň ň Ř ř Š š Ť ť Ů ů Ú ú Ý ý Ž ž Œ œ
 - ¶ Current status of [Boisik](#) is an alpha version: many features are missing, many don’t work. I hope (**not guarantee**) in the improvement in the future. Note that the Sans-serif math alphabet is faked one—[Boisik](#) will never have sans-serif variant.
-
- ¶ Please, don’t use [Boisik](#) if you need excellent stability, precision, and quality of typesetting.
